Z-FLEX® Chimney Liner Systems

**Z-FLEX® Insul-liner®**

Pre-Insulated Chimney Liner for Category 1 Gas Heating Equipment & Gas Fireplaces

- **Insul-Liner®** is another “simple solution” from Z-FLEX®. The National Fuel Gas Code (NFPA 54, ANSI Z223.1) recommends that liners be insulated in certain situations.
- A good rule of thumb is to use an insulated liner in exterior chimneys or when a brick chimney has no clay liner at all. The insulation will keep the flue gases warm to prevent condensation. Also refer to the equipment manufacturer’s instructions for their recommendations.
- **Insul-Liner®** replaces B-Vent when relining a masonry chimney.
- **Insul-Liner®** is insulated at the factory and protected with an outer aluminum jacket. This eliminates the time needed to insulate on the job site and prevents damage to the insulation during installation. Simply remove from the box and install.

- Insulated Aluminum Liner
- Chimney Flashing
- Rain Cap
- Mortar Collar
- 3 Screws

**Z-FLEX® Features and Benefits**

**Z-Flex® Triple Lock®** - Manufactured from 316Ti, titanium stabilized, nickel, chromium, molybdenum stainless steel. Excellent resistance to the corrosive effects of flue gases. Suitable for extended periods at elevated temperatures without compromising corrosion resistance. A superior 29-4C grade stainless steel option is also available for conditions requiring greater resistance to acidic attack.

**Construction** - **Triple Lock® Joint System**, acknowledged to be the best available for strength and longevity. Stainless steel strip is spirally wound and mechanically joined together forming an air tight and leakproof **Triple Lock®** seam. The corrugated outer wall provides crush protection during installation. The thin walled corrugated construction conducts heat quickly, aiding draft and discouraging the buildup of soot and other potentially corrosive residue.

**Dimensions** - Available in a range of sizes suiting all applications, from 2” to 24” diameter. Supplied in standard lengths up to 50 ft.

**Triple Lock® Smoothcore®** Construction - Twin Strip (2 ply) construction. The corrugated outer wall provides crush resistance during installation. The inner wall is smooth, permitting the smooth flow of flue gases and impeding the build up of soot and other potentially corrosive residue. The inner and outer walls are joined by a **Triple Lock® Joint System**, acknowledged to be the best available for strength and longevity.

**Approval** - **Z-Flex® Triple Lock® Chimney Liner Systems** are listed and labelled by Underwriters Laboratories to UL1777 and ULC S635, Chimney Lining Systems for existing Masonry and Factory Built Chimneys.

**Warranty** - Lifetime Limited Warranty.

---

**When to Z-FLEX®® a Chimney**

- When a masonry chimney has no liner at all
- When damage to existing chimney lining is evident
- When retrofit appliance has fan-assisted combustion and is vented alone
- When additional or replacement equipment is installed or an appliance is converted to gas from another fuel
- When the existing chimney is oversized relative to heating requirement
Smoothcore® Triple Lock® Liner eliminates turbulence inherent with corrugated liners, improving draft. Resists corrosive attack by not impeding the flow of condensate down the liner. Less opportunity for soot to accumulate.

DIRECT VENT System

A Completely Sealed System that does not Compromise Indoor Air Quality

Designed for use when converting existing wood-burning fireplaces into gas fireplaces

In terms of safety, efficiency and versatility, Direct Vent fireplaces have several advantages over traditional fireplaces. Using indoor air for combustion can de-pressurize the living space and potentially pull harmful flue gases back into the home. Direct Vent Systems use outdoor air instead of indoor air for combustion. Outside air is drawn in for combustion while flue gas is exhausted outside. The natural flow of heat creates a convection loop; as hot air exits the pipe, cooler, denser air is pulled back to the burner.

Direct Vent Insert Kits include: Two Triple Lock® Gas Liners for flue exhaust and outside combustion air, and either an extreme weather or decorative co-linear termination.

Direct Vent Co-Linear Flexible Liner Kit with Decorative Cap/Flashing
includes:
- Chimney Liners (Exhaust and Intake)
- Decorative Cap/Flashing
- High Temperature RTV Sealant
- Self-Tapping Screws

Direct Vent Co-Linear Flexible Liner Kit with Extreme Weather Cap/Flashing
includes:
- Chimney Liners (Exhaust and Intake)
- Extreme Weather Cap/Flashing
- High Temperature RTV Sealant
- Self-Tapping Screws
**Safety** - Direct Vent Systems exhaust all products of combustion outside maintaining higher indoor air quality. When fuel burns, releasing poisonous carbon monoxide becoming dangerous when exposed to it for too long and in high concentrations. Direct Vent flue Systems are completely sealed from the interior of the building, therefore no harmful flue gases are released into the living space.

**Efficiency** - Direct Vent Fireplace Systems burn natural gas or propane, unlike tradition fireplaces, converting most of the fuel to usable heat. They are completely sealed off from the interior rooms by a glass door, which prevents significant heat loss.

**Quality** - Z-Flex Triple Lock®, regarded as the strongest flexible duct construction method in the industry; provides piece of mind that flue gases are being safely vented outside the living space through continuous length flexible gas vent. In addition, computer added design and construction methods help produce aesthetically pleasing and efficient system components.

**Versatility** - Direct Vent Systems are easy to install. Continuous length Triple Lock® Flexible Gas Vent provides only two connection points; Insert and Termination. The Flexible Venting is quickly and easily routed through straight or offset existing masonry chimneys. Extreme Weather and Decorative Terminations are available for any installation.

**Safety Issues**

Since the federal government required modern heating equipment to achieve higher efficiencies in 1992, safely venting them has become more of a challenge. Today’s more efficient equipment produces lower flue gas temperatures than pre-1992 equipment. The low temperature flue gas provides little natural draft in chimneys and is more likely to condense into an acidic, and corrosive, solution. The result can cause property damage, personal injury, or death. The natural laws of physics that control this phenomenon pertain to all gas and oil fired equipment.

Our three major product lines; chimney liners, special gas vent (AL29-4C® stainless steel), and flexible vent connectors are all designed to prevent flue gas condensation or protect against its corrosive effects. Most of the products Z-FLEX® has developed are now recommended or required by the following national codes and testing agencies:

**1992 National Fuel Gas Code**

Venting Tables for sizing Chimney Liners and Vent Connectors when adding or replacing equipment. Insulated Connectors required in attics and other “cold” spaces.

**1997 NFPA 31**

“Installation of Oil Burning Equipment” Venting Tables for sizing Chimney Liners.

**International Approval Services (Formerly AGA)** June, 1996 – IAS requires all Category III gas boilers and furnaces to use a UL 1738 approved vent system (as Z-VENT®). July, 1998 – IAS requires all Category III gas residential unit heaters to use a UL 1738 approved vent system (as Z-VENT®).
